

NOVATECH

HR ATTRITION ANALYTICS

EXECUTIVE REPORT

Decision objective

Identify where employee departures are concentrated, determine the strongest actionable risk signals, and define practical retention priorities for HR leadership.

Prepared by Amirreza Akbari
Version 1.0 | July 2026

1. Executive Summary

NovaTech’s workforce analysis covers 1,468 employees and 226 recorded departures. The overall attrition rate is 15.4%, meaning approximately one in every 6.5 employees in the analytical population has left. The evidence indicates that attrition is not evenly distributed: it is concentrated among overtime workers, younger employees, early-tenure employees, selected sales roles, and employees reporting low job satisfaction.

HEADCOUNT	DEPARTURES	ATTRITION RATE	ACTIVE EMPLOYEES
1,468	226	15.4%	1,242
Employees analyzed	Recorded exits	Company benchmark	84.6% retained

Executive conclusion

The strongest actionable signal is overtime: employees who work overtime leave at 23.6%, compared with 12.3% among employees who do not. The second major issue is early-tenure retention, where employees with 0-1 years at the company leave at 21.3%.

Management priorities

- Reduce sustained overtime and rebalance workload in high-risk teams, particularly Sales.
- Introduce structured 30/60/90-day onboarding and first-year retention checkpoints.
- Investigate role-specific conditions for Sales Representative and HR Business Partner populations.
- Use job-satisfaction scores as an early-warning indicator in manager check-ins and retention reviews.

2. Workforce and Attrition Snapshot

Metric	Result	Executive interpretation
Total employees	1,468	Complete cleaned analytical population
Departures	226	Employees recorded with Attrition = Yes
Active employees	1,242	Employees retained in the dataset
Overall attrition rate	15.4%	Company-level benchmark for all segment comparisons
Average age	36.4 years	Workforce centered in early-to-mid career stages
Average monthly income	9,441	Descriptive workforce compensation average
Average tenure	3 years, 8 months	Workforce has relatively short

Metric	Result	Executive interpretation
		average company tenure

Interpretation note: this project is descriptive. It identifies patterns and associations in the available data; it does not establish that any individual variable directly causes attrition.

3. Department and Role Exposure

Department	Employees	Departures	Attrition rate
Sales	443	87	19.6%
Human Resources	57	10	17.5%
Unknown Department	19	3	15.8%
Research & Development	949	126	13.3%

What matters

Sales is the highest-risk department and also contributes meaningful departure volume. Research & Development contributes the largest number of departures because it is the largest department, but its rate is below the company benchmark. Rate and volume should therefore be considered together.

Role-level findings

Job role	Employees	Departures	Rate	Assessment
HR Business Partner	21	5	23.8%	Highest rate; small base
Sales Representative	152	33	21.7%	High rate and meaningful volume
Research Scientist	154	30	19.5%	Elevated risk
Sales Executive	152	27	17.8%	Above benchmark
Manager	325	53	16.3%	Largest departure count among roles
Research Director	161	13	8.1%	Lowest observed role rate

4. Primary Attrition Drivers

Risk dimension	High-risk group	Rate	Comparison group	Rate	Management implication
Overtime	Yes	23.6%	No	12.3%	Strongest operational signal
Age	Under 25	26.3%	55+	11.8%	Early-career retention gap
Tenure	0-1 years	21.3%	10+ years	10.8%	Onboarding/ first-year risk
Job satisfaction	Low	20.2%	Very High	12.9%	Engagement is actionable

Risk dimension	High-risk group	Rate	Comparison group	Rate	Management implication
Income band	Low Income	29.4%	High Income	14.8%	Small low-income sample; monitor

Evidence hierarchy

Overtime and early tenure should receive the strongest immediate attention because both have large employee bases and clear rate differences. The Low Income segment has the highest rate, but only 17 employees; it should be treated as a monitoring hypothesis rather than a confirmed enterprise-wide driver.

5. Variables with Limited Decision Value

Not every demographic difference is strategically meaningful. Gender and marital-status rates cluster close to the 15.4% company benchmark, so they should not be over-interpreted or used as primary targeting variables.

Dimension	Segment rates	Conclusion
Gender	Female 14.2%; Male 16.5%; Unknown 11.7%	Differences are modest and not a priority driver
Marital status	Divorced 14.7%; Married 15.6%; Single 15.5%	Rates are effectively similar
Unknown department	15.8% across 19 employees	Data-quality category, not a business unit

Data-quality action

Resolve the department value for 19 employees and review the 60 records with Gender = Unknown before the next reporting cycle. Unknown values should remain visible until corrected rather than being silently excluded.

6. Recommended Action Plan

Priority	Action	Owner	Timing	Success indicator
1	Review overtime concentration and redistribute workload in Sales and other overtime-heavy teams.	HR + Department Leaders	0-30 days	Overtime exposure and attrition trend decline

Priority	Action	Owner	Timing	Success indicator
2	Launch first-year onboarding with 30/60/90-day check-ins and a six-month retention review.	HR Operations	0-60 days	Lower 0-1 year attrition rate
3	Run focused role reviews for Sales Representatives and HR Business Partners.	HR Business Partners	30-60 days	Documented causes and role action plans
4	Integrate job-satisfaction scores into manager check-ins and escalation rules.	People Managers	30-90 days	Fewer low-satisfaction employees; improved retention
5	Refresh the dashboard monthly and track cohort movement over time.	People Analytics	Monthly	Consistent reporting cadence and trend history

Recommended governance cadence

- Monthly: dashboard refresh, data-quality review, overtime and early-tenure monitoring.
- Quarterly: department and role deep-dive, action-plan progress, trend comparison.
- Semiannual: review KPI thresholds, workforce definitions, and retention strategy effectiveness.

7. Decision Framework and KPIs

KPI	Current baseline	Suggested monitoring trigger
Overall attrition rate	15.4%	Escalate sustained increase above baseline
Overtime attrition rate	23.6%	Priority if gap vs non-overtime remains >5 percentage points
First-year attrition rate	21.3%	Priority until trend moves toward company average
Low job-satisfaction attrition	20.2%	Trigger manager intervention for persistent low scores
Sales attrition rate	19.6%	Department action plan if rate remains above benchmark
Unknown department records	19 employees	Target zero unresolved records

These triggers are proposed management thresholds for monitoring. They are not statistical control limits and should be refined after several reporting cycles produce time-series history.

8. Limitations and Next Steps

- The analysis is based on a static dataset and does not show month-by-month attrition trends.
- Findings show association, not causation; additional interviews or qualitative evidence are needed before policy changes.
- Small segments can produce unstable rates, particularly Low Income and HR Business Partner.
- Unknown department and gender values should be corrected at source.
- Future versions should connect to regularly refreshed HR data and include recruitment cost, manager, location, and exit-reason information.

Next analytical maturity step

After several monthly refreshes, NovaTech should add trend analysis, retention cohorts, voluntary vs involuntary exit classification, and a carefully governed predictive-risk model.

9. Closing Statement

The analysis provides a clear, decision-oriented view of NovaTech's attrition exposure. The evidence supports immediate attention to overtime, first-year retention, selected sales roles, and low job satisfaction. These priorities are practical, measurable, and suitable for recurring management review through the Excel dashboard. By pairing interventions with a monthly governance cadence, HR leadership can move from one-time reporting toward an ongoing employee-retention management process.

Executive decision requested

Approve a 90-day retention action plan focused on overtime reduction, first-year employee support, role-level investigation, and monthly dashboard governance.

Appendix A - Source and Definitions

Item	Definition
Analytical source	NovaTech HR Attrition Analysis Excel workbook
Population	1,468 cleaned employee records
Departure definition	Attrition field equals Yes
Attrition rate	Departures divided by employees in the selected group
Benchmark	Overall company attrition rate of 15.4%
Reporting date	July 2026
Document status	Final portfolio report, Version 1.0
